# Contents

<b>Preface</b>	<b>v</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Terminology for Differential Equations . . . . .	2
1.2 Solutions and Non-Solutions of Differential Equations .	3
<b>2 First-Order Equations</b>	<b>7</b>
2.1 Separable Equations . . . . .	7
2.1.1 General Version . . . . .	8
2.2 Integrating Factor . . . . .	14
2.2.1 General and Particular Solutions . . . . .	16
2.2.2 Interesting But Tangentially Useful Topics	17
2.3 Modeling . . . . .	20
2.3.1 Mixing . . . . .	20
2.3.2 Newton's Second Law . . . . .	22
2.3.3 Logistic Growth or Decay . . . . .	25
2.3.4 Newton's Law of Cooling . . . . .	26
2.4 Steady States and Stability . . . . .	33
2.4.1 General Version . . . . .	35
2.4.2 Sketching the Solution . . . . .	36
2.4.3 Parting Comments . . . . .	39
<b>3 Second-Order Linear Equations</b>	<b>43</b>
3.1 Initial Value Problem . . . . .	44
3.2 General Solution of a Homogeneous Equation . . . . .	44
3.2.1 Linear Independence and the Wronskian . .	45
3.3 Solving a Homogeneous Equation . . . . .	47
3.3.1 Two Real Roots . . . . .	47
3.3.2 One Real Root and Reduction of Order . .	47
3.4 Complex Roots . . . . .	48
3.4.1 Euler's Formula and its Consequences . . .	48
3.4.2 Second Representation . . . . .	50
3.4.3 Third Representation . . . . .	50
3.5 Summary for Solving a Homogeneous Equation . . . . .	51

3.6	Solution of an Inhomogeneous Equation . . . . .	54
3.6.1	Non-Uniqueness of a Particular Solution . .	55
3.7	The Method of Undetermined Coefficients . . . . .	55
3.7.1	Summary Table . . . . .	59
3.8	Solving an Inhomogeneous Equation . . . . .	59
3.9	Variation of Parameters . . . . .	62
3.9.1	The Solution of an IVP . . . . .	64
3.10	Linear Oscillator . . . . .	66
3.10.1	The Spring Constant . . . . .	66
3.10.2	Simple Harmonic Motion . . . . .	67
3.10.3	Damping . . . . .	70
3.10.4	Forced Motion and Resonance . . . . .	72
3.11	Euler Equation . . . . .	79
3.11.1	Examples . . . . .	81
3.12	Guessing the Title of the Next Chapter . . . . .	81
<b>4</b>	<b>Linear Systems</b>	<b>83</b>
4.1	Linear Systems . . . . .	84
4.1.1	Example: Transforming to System Form . .	85
4.1.2	General Version . . . . .	86
4.2	General Solution of a Homogeneous Equation . . . . .	88
4.3	Review of Eigenvalue Problems . . . . .	89
4.4	Solving a Homogeneous Equation . . . . .	95
4.4.1	Complex-Valued Eigenvalues . . . . .	95
4.4.2	Defective Matrix . . . . .	97
4.5	Summary for Solving a Homogeneous Equation . . . . .	98
4.6	Phase Plane . . . . .	103
4.6.1	Examples . . . . .	104
4.6.2	Connection with an IVP . . . . .	108
4.7	Stability . . . . .	113
4.8	Modeling . . . . .	117
<b>5</b>	<b>Nonlinear Systems</b>	<b>119</b>
5.1	Non-Linear Systems . . . . .	120
5.1.1	Steady-State Solutions . . . . .	122
5.2	Stability . . . . .	124
5.2.1	Derivation of the Stability Conditions . . .	126
5.2.2	Summary . . . . .	129
5.2.3	Examples . . . . .	130
5.3	Periodic Solutions . . . . .	138
5.3.1	Closed Solution Curves and Hamiltonians .	140
5.3.2	Finding the Period . . . . .	144
5.4	Motion in a Central Force Field . . . . .	149
5.4.1	Steady States . . . . .	150

5.4.2	Periodic Orbit . . . . .	151
<b>6</b>	<b>Laplace Transform</b>	<b>155</b>
6.1	Definition . . . . .	155
6.1.1	Linearity Property . . . . .	156
6.2	Inverse Laplace Transform . . . . .	157
6.3	Properties of the Laplace Transform . . . . .	161
6.3.1	Transformation of Derivatives . . . . .	161
6.3.2	Convolution Theorem . . . . .	162
6.4	Solving Differential Equations . . . . .	163
6.4.1	The Transfer Function . . . . .	165
6.4.2	Comments and Limitations on Using the Laplace Transform . . . . .	167
6.5	Jump Discontinuities . . . . .	169
6.6	Mathematical Foundations . . . . .	172
6.7	Solving Equations with Non-Smooth Forcing . . . . .	176
6.7.1	Impulse Forcing . . . . .	177
6.8	Solving Linear Systems . . . . .	183
6.8.1	Chapter 4 versus Chapter 6 . . . . .	185
<b>7</b>	<b>Partial Differential Equations</b>	<b>189</b>
7.1	Balance Laws . . . . .	190
7.2	Boundary Value Problems . . . . .	190
7.2.1	Eigenvalue Problems . . . . .	192
7.3	Separation of Variables . . . . .	195
7.3.1	Separation of Variables Assumption . . . . .	196
7.3.2	Finding $F(x)$ and $\lambda$ . . . . .	196
7.3.3	Finding $G(t)$ . . . . .	197
7.3.4	The General Solution . . . . .	198
7.3.5	Satisfying the Initial Condition . . . . .	198
7.3.6	Examples . . . . .	198
7.4	Sine and Cosine Series . . . . .	202
7.4.1	Finding the $b_n$ 's . . . . .	203
7.4.2	Convergence Theorem . . . . .	204
7.4.3	Examples . . . . .	204
7.4.4	Cosine Series . . . . .	208
7.4.5	Differentiability . . . . .	211
7.4.6	Infinite Dimensional . . . . .	211
7.5	Wave Equation . . . . .	214
7.5.1	Examples . . . . .	216
7.5.2	Natural Modes and Standing Waves . . . . .	218
7.6	Inhomogeneous Boundary Conditions . . . . .	219
7.6.1	Steady State Solution . . . . .	219
7.6.2	Transformed Problem . . . . .	220

---

	7.6.3	Summary . . . . .	220
	7.6.4	Wave Equation . . . . .	221
7.7		Inhomogeneous PDEs . . . . .	222
	7.7.1	Summary . . . . .	224
	7.7.2	A Very Useful Observation . . . . .	225
7.8		Laplace's Equation . . . . .	227
	7.8.1	Rectangular Domain . . . . .	228
	7.8.2	Circular Domain . . . . .	231
<b>A</b>		<b>Matrix Algebra: Summary</b>	<b>237</b>
<b>B</b>		<b>Answers</b>	<b>239</b>
		<b>Bibliography</b>	<b>252</b>
		<b>Index</b>	<b>253</b>
